SUMMARY

Computer Science student at BINUS University with experience in game development, full-stack and AI applications, graphic design, and machine learning research. Designer of Close Enough Colony, an AI-assisted indie game released on itch.io. Aspiring game developer seeking a game, software, or AI internship.

EDUCATION

Bina Nusantara University – Bachelor of Computer Science (Alam Sutera) 2024 – 2028 (Expected)
Relevant Coursework: Artificial Intelligence, OOP, Data Structures, Algorithm Design & Analysis, Database Technology, Software Engineering, Computer Networks, Game Design, User Experience, Extended Reality, Multimedia Systems.

In Progress (Semester 5): Game Programming, Computer Graphics, Compilation Techniques, Web Programming, Operating Systems, Venture Creation. **Activities:** HIMTI (Computer Science Student Association), event support; HISHOT 2025 event website design team (Figma).

EXPERIENCE

Intern – Giant Palace, Pontianak Jul 2023 – Sep 2023
Printing & merchandise studio

- Designed and produced print and merchandise artwork (banners, booklets, personalized pens, red envelopes) and applied custom prints to tote bags, shirts, and mugs.

PROJECTS & RESEARCH

Close Enough Colony – Indie Idle Game (Godot 4.7, HTML5) bonebit.itch.io/close-enough-colony

- Designed and directed (AI-assisted, Claude Code), tested, and released a browser-playable idle colony sim on itch.io where a scarecrow foreman runs the colony while the player is away.
- Features: 8 critter types with terrain bonuses, scouting, buildings and training, up to 12 hours of offline progress with a foreman report, a tutorial, and browser autosave.

Lily – Local AI Assistant (Python, Ollama, ChromaDB, FastAPI) Personal project

- Designed and directed (AI-assisted) a local assistant on a 4 GB GPU: Ollama LLM, semantic memory (ChromaDB), voice (faster-whisper, Kokoro TTS), screen understanding (vision + OCR), and an animated avatar.
- One reply pipeline serves Discord, a Minecraft bot, and a FastAPI phone web app (SSE streaming); includes prompt budgeting for a 2K-token context, sandboxed self-written skills, and 160+ test files.

Chi Matcha – Mobile Ordering App (User Experience course, group project) Figma, Android (Java)

- Designed a matcha cafe ordering app in Figma (wireframes to prototype), then built it in Java: login and register with validation, menu with item details, ice and sugar customization, and a branch page.

Waste Classification System – Machine Learning Research (COMP6696, group project) Completed

- Trained an EfficientNet-B0 classifier on TrashNet (94% accuracy); wrote an IEEE-format paper and poster.

ML for DNA Sequence Classification – Literature Review (Computational Biology, first author) Completed

- Systematic review of 13 primary sources (from 200+ papers, 2015–2024) comparing SVM, Random Forest, Naive Bayes, CNN, LSTM, and DNABERT.

Other Course Projects Vue.js, Figma

- Spojefy, a music streaming web app (Vue.js, ImageKit CDN, team project); B-Eatery and cryPIto, website designs in Figma (Human and Computer Interaction, group projects).

SKILLS

Languages, Frameworks & Engines: Python, JavaScript, C++, Java, C, C#, Vue.js, FastAPI, Godot, Unity
Data & AI: MariaDB/MySQL, ChromaDB, local LLMs (Ollama), image classification (EfficientNet)
Design: Figma, Canva, print & merchandise design | **Other:** Android AR (ARCore), LaTeX
