SUMMARY

Computer Science student at BINUS University with hands-on experience in game development, full-stack and AI applications, graphic design, and machine learning research. Developer of Close Enough Colony, an indie game released on itch.io, seeking a software, AI, or game development internship.

EDUCATION

Bina Nusantara University – Bachelor of Computer Science (Alam Sutera) 2024 – Present
Relevant Coursework: Artificial Intelligence, Object Oriented Programming, Data Structures, Algorithm Design & Analysis, Database Technology, Software Engineering, Computer Networks, Game Design, User Experience, Extended Reality, Multimedia Systems.

In Progress (Semester 5): Game Programming, Computer Graphics, Compilation Techniques, Web Programming, Operating Systems, Venture Creation.

EXPERIENCE

Intern – Giant Palace, Pontianak Jul 2023 – Sep 2023
Printing & merchandise studio

- Designed and produced print and merchandise artwork, including banners, booklets, and custom product designs such as personalized pens and red envelopes.
- Finished physical products by applying custom prints to tote bags, shirts, and mugs.

PROJECTS & RESEARCH

Close Enough Colony – Indie Idle Game (Godot 4.7, HTML5) bonebit.itch.io/close-enough-colony

- Designed, built, and released a cozy idle colony sim on itch.io, playable in the browser, where a scarecrow foreman runs the colony while the player is away.
- Built 8 critter types with terrain bonuses, scouting for new land, buildings and critter training, up to 12 hours of offline progress with a foreman report on return, a guided tutorial, and browser autosave.

Lily – Local AI Assistant (Python, Ollama, ChromaDB, FastAPI) Personal project

- Built a local AI assistant on a 4 GB GPU: Ollama LLM with semantic memory (ChromaDB), voice in/out (faster-whisper, Kokoro TTS), screen understanding (vision + OCR), and an animated avatar.
- Connected one reply pipeline to Discord, a Minecraft bot (HTTP bridge), and a FastAPI phone web app with streaming (SSE); added prompt budgeting for a 2K-token context, sandboxed self-written skills (AST checks, isolated tests, rollback), and 160+ test files.

Chi Matcha – Mobile Ordering App (User Experience course, group project) Figma, Android (Java)

- Designed a matcha cafe ordering app in Figma, from wireframes to prototype, then built it in Java.
- Implemented login and register with validation, menu browsing with item details, order customization (ice and sugar level), and a branch location page.

Waste Classification System – Machine Learning Research (COMP6696, group project) Published

- Trained an EfficientNet-B0 classifier on TrashNet (94% accuracy); published as an IEEE paper and poster.

ML for DNA Sequence Classification – Literature Review (Computational Biology, first author) Completed

- Systematic review of 13 primary sources (screened from 200+ papers, 2015–2024) comparing SVM, Random Forest, Naive Bayes, CNN, LSTM, and DNABERT for DNA sequence classification.

SKILLS

Programming Languages: Python, JavaScript, C++, Java, C, C#
Frameworks & Game Engines: Godot, Unity, Vue.js, FastAPI
Data & AI: MariaDB/MySQL, ChromaDB, local LLMs (Ollama), machine learning frameworks
Design: Figma, Canva, print & merchandise design | **Other:** Android AR (ARCore), LaTeX
